The Church of Jesus Christ of latter-Day Saints
Junior Front End Developer-Contingent

The Church of Jesus Christ of Latter-Day Saints has an opening for a junior front-end web developer in Riverton Utah. The opening was posted on November 6th, 2017.

The role of a junior front-end web developer is to improve all areas of development at the Church, by focusing on maintenance, code quality, security, scalability, and longevity. Junior developers will have opportunities to demonstrate leadership skills. Junior developers will be guided and mentored by the best developers at the Church. The role of these mentors is to encourage and lift as fast as the junior developer is willing and able.

It is preferred that the candidate have a bachelors degree in computer science, computer information technology, or a related field. They should be familiar and comfortable with responsive design, have strong communication and problem-solving skills, and understand best practices for front-end development. Basic required skills are HTML, CSS, JavaScript, cross-browser awareness, accessibility, and internationalization. The candidate should also have experience with the following technologies:

- React
- Redux
- Angular
- SASS
- JavaScript testing frameworks
- Grunt/ Gulp
- NodeJS
- Web Services
- Git
- HTML, CSS, and JavaScript standards
- Chrome dev tools

Candidates must be members of the Church of Jesus Christ of Latter-Day Saints and be temple worthy.
